

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (Currently Amended): A catalyst comprising (A) at least one TON zeolite molecular sieve chosen from Theta-1, ZSM-22, ISI-1, NU-10 and KZ-2, (B) at least one ~~ZBM-30~~, ZBM-30 zeolite synthesized with triethylenetetramine as a structuring agent (C) at least one hydrodehydrogenating element, and (D) at least one porous mineral matrix.

Claim 2 (Previously Presented): A catalyst according to claim 1 in which the hydrodehydrogenating element is chosen from the elements of Group VIB and Group VIII of the periodic table.

Claim 3 (Previously Presented): A catalyst according to claim 2 in which the hydrodehydrogenating element of Group VIB is molybdenum and/or tungsten.

Claim 4 (Previously Presented): A catalyst according to claim 2 in which the hydrodehydrogenating element of Group VIII is a noble metal of Group VIII.

Claim 5 (Previously Presented): A catalyst according to claim 4 in which the hydrodehydrogenating element of Group VIII is platinum and/or palladium.

Claim 6 (Previously Presented): A catalyst according to claim 1 subjected to sulphurization treatment.

Claim 7 (Previously Presented): A process for improving the pour point of a paraffin charge, in which the charge to be treated is brought into contact with a catalyst according to claim 1.

Claim 8 (Previously Presented): A process according to claim 7 in which the treated charges contain at least 20% by volume of compounds boiling above 340°C.

Claim 9 (Previously Presented): A process according to claim 7 in which the operating conditions are the following:

- the reaction temperature is between 200 and 450°C,
- the pressure is between 0.1 and 25 MPa,
- the hourly volume rate (hvr expressed as volume of charge injected per volume unit of catalyst per hour) is between approximately 0.05 and approximately 30h<sup>-1</sup>.

Claim 10 (Previously Presented): A process according to claim 7 in which the charge undergoes a hydroisomerization-hydroconversion stage beforehand.

Claim 11 (Previously Presented): A process according to claim 10 in which all of the effluent from the hydroisomerization-conversion stage is sent to the dewaxing catalyst.

Claim 12 (Previously Presented): A process according to claim 10 in which the hydroisomerization-hydroconversion stage is preceded by a hydrotreating stage.

Claim 13 (Previously Presented): A process according to claim 12 in which the hydrotreating stage is followed by an intermediate separation.

Claim 14 (Previously Presented): A process according to claim 7 in which the effluent from the catalytic hydrodewaxing stage is at least partly sent to a hydrofinishing catalyst.

Claim 15 (Cancelled)

Claim 16 (Cancelled)

Claim 17 (New)      A catalyst according to claim 1, wherein the TON zeolite comprises ZSM-22.

Claim 18 (New)      A catalyst according to claim 17, wherein the hydro-dehydrogenating element comprises platinum.
